

Mentor feedback showing student engagement.

The students really enjoyed being allowed to write their solutions and working on the board.

Perfect adaptation of students not knowing how to round yet. It is so important to be flexible and to realise what it is that you want the students to be able to do at the end of the lesson (and not to get lost on what is going to be covered next lesson).

Truncating the decimal (just cut off and don't worry about rounding) \Rightarrow excellent!!

Then when you did Q2 c) on the board, really well done then to introduce the concepts of rounding off. \leftarrow terrific.

You owned this lesson Amanda.

It was a pleasure to be in the room and to see the students so engaged and having learnt the concepts so well.
